                       EXPERIMENT
                       Title
                              SUB ARRAY WITH MAX SUM
                             Description & Control of the Control
                                      You are given a list of integers, and your task is to find the subarray with the maximum sum. Write a function or method to solve
                                      this problem efficiently and return the maximum sum.
 50028
                                      Input:
                                     n: the no of elements in the array
                                     nums (List of integers): A list of integers (1 <= len(nums) <= 10^5)
                                      Sample input:
                                      8
                                      -1 2 3 10 -4 7 2 -5
                                                                                                                                                                                                                                                                                                                                                                                                                                          28 BRIT.
                                      Sample output:
                                      20
                                     Explanation:
                                      The max subarry sum is 20. The subarray is [2,3,10,-4,7,2]
                              Source Code
                                       def max_subarray_sum(nums):
                                                    max_so_far = nums[0]
                                                    curr_max = nums[0]
                                                    for num in nums[1:]:
                                                                   curr_max = max(num, curr_max + num)
                                                                   max_so_far = max(max_so_far, curr_max)
                                                    return max_so_far
                                      n = int(input())
                                      nums = list(map(int, input().split()))
                                      max_sum = max_subarray_sum(nums)
                                      print(max_sum)
                                                                                                3BR
